DESCRIPTION

The ACI-3000 is an accessory for the following Premium series: ODS-1500, ODS-3000 and ODX-3000.

This device provides the following advantages:

1. It reduces the inrush current to the values indicated in the table.
2. It provides active protection against reverse polarity, so that the DC/AC inverter does not receive voltage or overcurrent when the voltage is reversed at the input of the ACI-3000 accessory.
3. It can completely stop the inverter via the ON/OFF input so that only a very small standby current remains.

INSTALLATION

1. **WARNING:** The inverter (series ODS-1500, 3000 and ODX-3000) must be configured with the remote ON/OFF signal at high level when active. Thus, the inverter starts up applying voltage to remote ON/OFF input. Otherwise, the accessory may suffer irreparably damages.
2. Remove the protective cover of the input inverter terminals
3. For an easier assembly, we recommend replacing the input terminals screws of the inverter with the included Allen type ones, leaving them lose.
4. Insert terminals 3 and 4 on the input terminals of the inverter. See figure-1.
5. Mount the ACI-3000 brackets to the mounting surface with the screws lose.
6. Tighten the terminal Allen screws.
7. Tighten the bracket screws.
8. Place the inhibit cable included. See figure-2.
